Professional Summary

AI/ML Engineering student focused on building practical machine learning and intelligent systems. Experienced in developing and deploying AI-driven and full-stack applications using Python, ML frameworks, and modern web technologies. Interested in combining machine learning with scalable backend engineering to solve real-world problems.

Education

Anurag University Hyderabad, TG
Bachelor of Technology in Artificial Intelligence and Machine Learning — GPA: 8.90 *Aug 2024 – Jul 2028*

Experience

Full-Stack Developer / Product Engineer Jul 2026 – Present
Loopers *Hyderabad*

- Contributed to the development of a production-oriented hyperlocal quick-commerce MVP, working across both React frontend and Node.js/Express backend.
- Implemented and maintained core product features spanning authentication, product catalog, cart, checkout, order management, admin workflows, and real-time order tracking.
- Took primary ownership of ongoing application maintenance, independently debugging production issues, fixing regressions, and implementing new feature requirements.

Projects

CardioTwin – Cardiovascular Risk Re-Evaluation Platform GitHub
Python, XGBoost, LightGBM, Streamlit

- Built a cardiovascular risk prediction platform that estimates patient cardiac risk using ECG parameters (QTc, QRS), LVEF, blood pressure, chemotherapy dosage, and longitudinal clinical records.
- Trained and evaluated Gradient Boosting models (XGBoost and LightGBM), achieving 89% ROC-AUC on validation data for treatment-cycle risk prediction.
- Developed a longitudinal patient dashboard to compare cardiac biomarkers and predicted risk across multiple chemotherapy cycles, enabling continuous patient monitoring.

Loopers – Quick Commerce Platform for College Students Live Demo
React, Express.js, MongoDB

- Developed and launched a student-operated quick-commerce platform used by 200+ students, enabling hyperlocal delivery of daily essentials and on-demand document printing.
- Implemented 20+ production features, including JWT authentication, role-based access control, order management, print request workflows, analytics dashboards, and checkout.
- Built a responsive React Progressive Web App with Express.js, MongoDB Atlas, Cloudinary, and automated deployments on Render and Vercel.

Lenora – Agentic AI Study Planner Github
Next.js, TypeScript, MongoDB, RAG, Multi-Agents

- Architected a multi-agent learning system with a custom orchestration harness coordinating Planner, Feynman, and Learner agents across a continuous plan–learn–assess–adapt workflow.
- Designed a personalization architecture around persistent student state, integrating goals, tasks, topics, and assessment outcomes to enable context-aware planning and performance-driven learning adaptation.
- Integrated retrieval-augmented generation (RAG) over uploaded study materials, enabling agents to ground learning interactions in user-provided resources and learner-specific context.

Technical Skills

Languages : Python, JavaScript, TypeScript, C, C++, Java
Frameworks & Libraries : scikit-learn, PyTorch, NumPy, Pandas, Matplotlib, React, Next.js, Node.js, Express, Tailwind CSS, GraphQL, gRPC
Infrastructure & Tools : Docker, Kubernetes, AWS (S3, EC2, Lambda), PostgreSQL, Redis, Git, Linux, CI/CD

Achievements

- Presented an AI-based system at the INAE Conclave, explaining system design, evaluation methodology, and real-world deployment considerations.
- Secured 2nd Prize in a college-level hackathon for developing an AI-driven solution under strict time constraints.
- Selected to showcase projects at the TEJAS University-Level Project Expo, demonstrating practical AI system implementation.
- Served on the technical organizing committee for university hackathons and engineering events.
- Active technical contributor in a university coding club, supporting workshops and technical initiatives.
